November 1, 2011

LS Research is pleased to announce recent improvements to its 3 meter anechoic chamber. During the month of October, LS Research, with the assistance of TDK RF Solutions experts, upgraded its in-house 3 meter anechoic chamber.

Through strategic placement of TDK RF Solutions IP, IP-BL, and IS material absorbers, the normalized site attenuation and site voltage standing wave ratios realized improved measurements; and the chamber has greater performance characteristics through 40GHz. These upgrades increase microwave measurement accuracy, and enhance performance in tests such as transmitter certification and antenna patterns.

These improvements are part of LS Research's long standing commitment to providing excellent service to its customers, and its demonstrated strategy of continuous improvement.

We look forward to being able to continue to assist with your future testing needs!

Regards,

Ryan Urness
Laboratory Manager
